

2011 INTERNATIONAL WORKSHOP ON ENVIRONMENT AND ALTERNATIVE ENERGY

“Global Collaboration in Sustainable Environmental and
Alternative Energy Strategies”

Noordwijk, The Netherlands – November 15 – 18, 2011

Mark Your Calendars!

The National Aeronautics and Space Administration (NASA) and Portuguese Center for Pollution Prevention (C3P) are holding an International Workshop on Environment and Alternative Energy, November 15 - 18, 2011 at The European Space Research and Technology Centre (ESTEC).

An exciting program is being planned that will include presentations on current issues, progress on those issues, and technological solutions, from research and development to commercially available technologies, with a view toward collaboration.

This year’s workshop will have a unique combination of technical presentations and discussions including:

- Materials management and substitution in support of space operations
- Remediation technologies and strategies
- Emerging renewable and alternative energy technologies
- Encroachment risk analysis and mitigation
- Adaptive response to climate change
- Green sustainable development and redevelopment
- Recycling and pollution control strategies
- Student presentations on related international and domestic research

Do not miss this opportunity to hear distinguished international and U.S. guest speakers, workshop leaders, and students present information and ideas relevant to European and U.S. engineers and scientists interested in solving their environment and energy issues.

Who should attend?

This workshop will be geared toward international and U.S. scientists, engineers, academics, and students from around the globe affiliated with government agencies, universities, as well as large and small businesses.

Workshop Registration

Although there is no cost for the workshop, **registration is required.**
